

Excuse-o-Tron 3000

AI Zero-Shot Excuse Classifier

Team: Vlad Călinescu-Ivan, Tibi Ionescu

The Concept

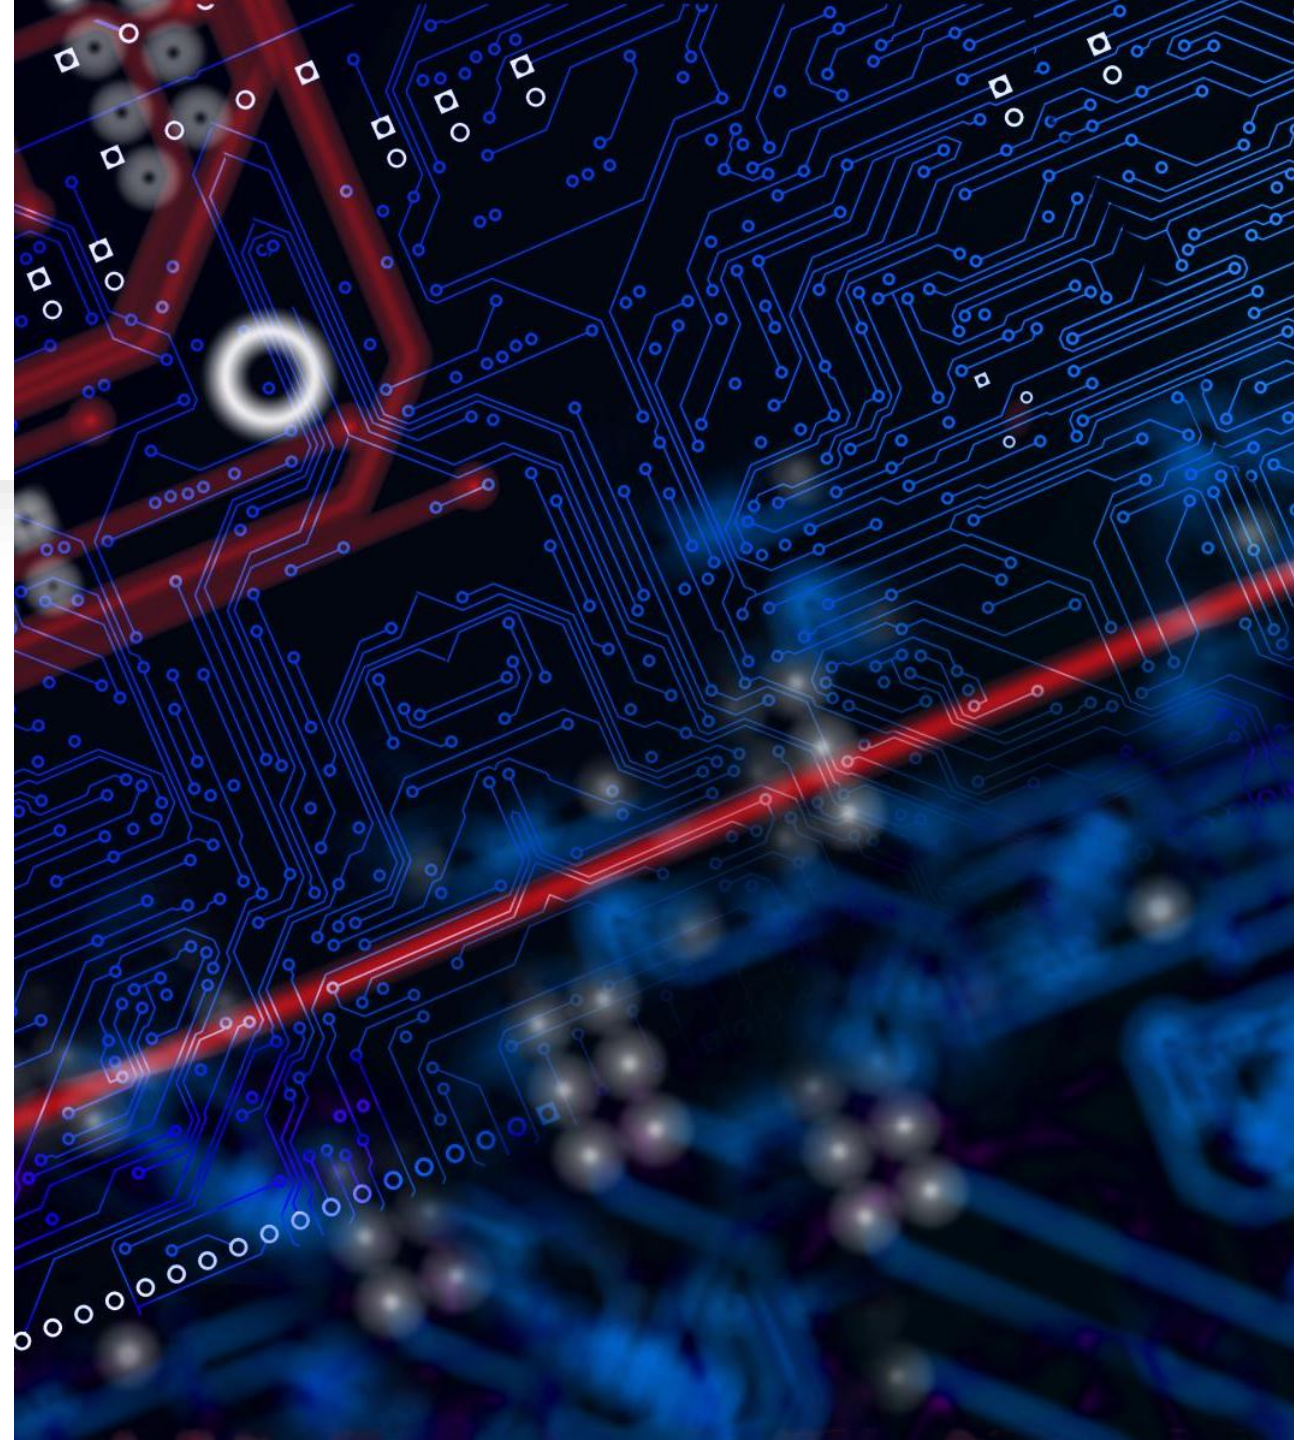

The Problem: Professors and managers hear a million excuses. How do we know which ones are real and which ones are blatant lies?

The Solution: An AI judge that instantly categorizes excuses based on their "cringe" and truthfulness levels.

The Tech Magic

- **Zero-Shot Classification:** Explain that the AI wasn't trained on excuses; it uses semantic reasoning to categorize text dynamically.
- **Edge AI (In-Browser):** Emphasize that there is **no backend server** and **no API keys**. The model downloads and runs entirely on the user's CPU using Transformers.js. Highlight that this means zero server costs and 100% data privacy.
